

Cybersecurity Incident Update

June 18, 2026

The City is notifying residents that it recently identified a cybersecurity incident that occurred on Monday, June 8, which impacted certain computer systems.

As soon as the issue was detected, the City took immediate steps to respond, including engaging experienced cybersecurity professionals and notifying law enforcement. We are actively working with these partners to investigate this matter and to help ensure the continued security of our systems.

Since the investigation is ongoing, the City is not able to share additional details at this time. As we are able, we will provide more information as the investigation continues and as it becomes available.

In the meantime, we want to reassure our community that City services are fully operational. All systems have been restored, and there is no impact to day-to-day operations.
